

DATA LITERACY

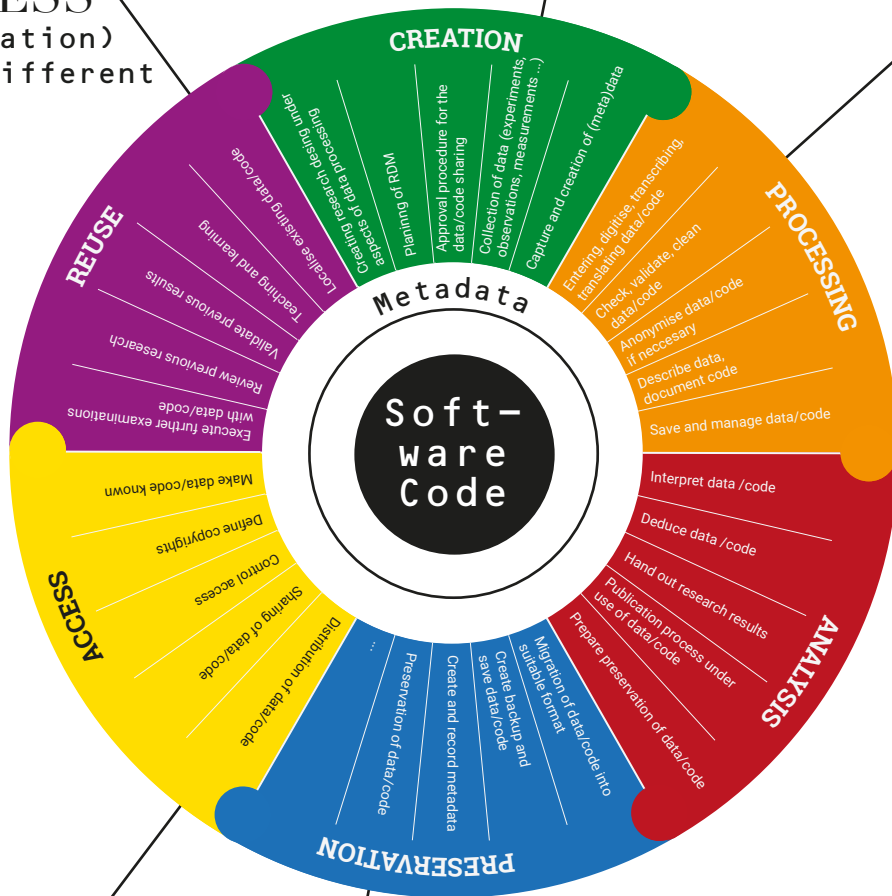

Selection of a suitable tool (e.g. IIIF annotation server) for data enrichment and data hub for preserving the annotations

ACCESS

Data (and information) is reusable in different contexts

DATA CAPTURE

Data enrichment

User Story 25

As a Wikimedian I am happy to be involved in the digital cultural commons and have already made many edits on Wikipedia pages about cultural heritage and made pictures available for free use at WM Commons. I have made contributions to Europeana's crowd sourcing projects, such as annotating pictures from the 1st World War. I am particularly interested in providing my specialized knowledge on Corinthian temples for various digital objects. I am pleased if this knowledge can be made available a human- and machine-readable way and be reused in research and I can help expanding the general body of knowledge in this field while doing so.
