Selection of a suitable tool for automated data enrichment / annotation

DATA LITERACY

Adaptation of automatically generated metadata

User Story 22

As a conservator of monuments and buildings, I would like to enrich our existing collection with metadata on material and style in order to offer our users added value. I don't have time to annotate every single picture myself, for this reason I want to use automatic methods. However, it is important to me that I keep control over the results and can adapt the generated metadata.
