

ACCESS

Data can be retrieved and reused in various formats via suitable interfaces

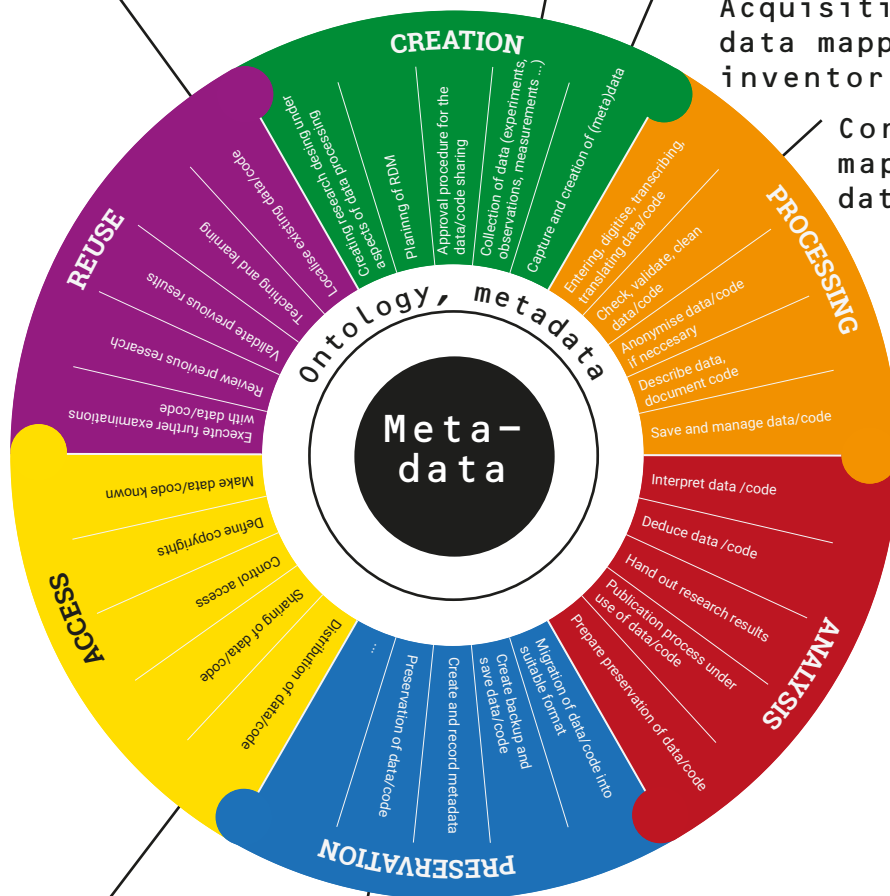

DATA LITERACY HELPDESK

Choice of suitable metadata formats and exchange formats

DATA CAPTURING

Acquisition of data and/ or data mapping from existing inventories

Correction of the mapped and imported data

PUBLICATION

Selection of suitable licenses to enable subsequent use on other platforms as DDB and Europeana

LTP/LTA

User Story 28

As curator of a major museum for art and cultural history, I am planning the web publication of our inventory data as part of the implementation of our institution's new digital strategy. Our inventory should not only be searchable in multiple languages on our website, but should also be delivered to relevant portals such as the DDB and Europeana, in order to make our inventory known to as many users as possible, in particular the expert scientists. They should be able to access the differentiated specialized terminology of our intern database in multiple languages, which has been available only in German up to now. Since the database vocabulary has grown historically over the past two decades, editing is necessary prior to the web publication.
